OUR COMMITMENT TO ENVIRONMENTAL RESPONSIBILITY

OUR APPROACH

For a number of years now, we have been pursuing an eco-responsible approach: whether in terms of our sourcing, with the selection of French and European suppliers for improved traceability of the origin of our raw materials; or in terms of our industrial waste, through the recovery of our foam residues, which are compacted and incorporated into a second life cycle.

Today, we are striving to achieve even more in order to **limit the environmental footprint of our products.** To achieve this, we have worked towards setting up a **circular economy** using new recovery processes to **meet your expectations** and the emerging needs of your sectors of activity.

TYYNY now draws on new partnerships with industries specialising in foam recycling to offer all our customers **a truly effective waste management solution.**
Therefore, we offer to collect our products for replacement and **transport them** to a recycling and recovery centre.

HOW CAN WE TAKE RECYCLING A STEP FURTHER?

Our commitment to this **eco-responsible and environmentally friendly approach stems above all from values that are dear to our entire team**. As a key stakeholder in today's economic and societal interactions and their evolution, the TYYNY brand is firmly rooted in modernity and aware of the challenges of our century, whether environmental, ethical or human.

The idea was to incorporate this same **recycled foam into our new products,** in accordance with the requirements of the inspection and certification bodies to which all our eco-designed products are sent for testing in order to validate their compliance with the range of standards governing the sports and leisure facilities that we design and build.
Today, **the ecological footprint created by manufacturing recycled foam is 20 times lower than that of manufacturing new foam.**
